A New Book for the Modern Miss

The Girl Guide to Missiles is a new book that teaches women how to build and fly missiles. It's the perfect book for the modern miss who wants to learn about science and engineering in a fun and engaging way.

The book is written by Dr. Sarah Shea, a rocket scientist and engineer. Dr. Shea has worked on a variety of missile programs, including the development of the Patriot missile. She is passionate about teaching women about science and engineering, and she believes that The Girl Guide to Missiles will inspire a new generation of female scientists and engineers.

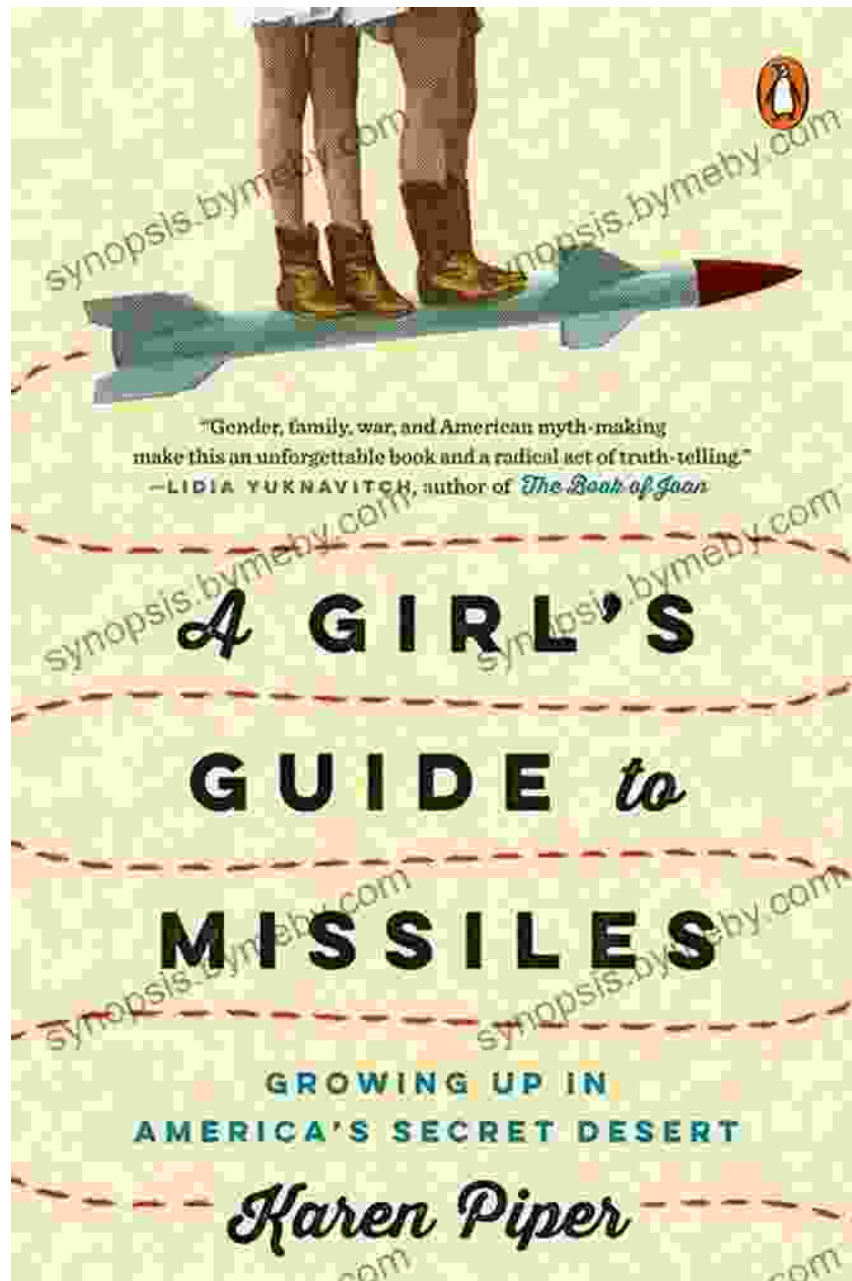

The book is divided into four parts:

1. **The Basics of Missiles:** This section covers the basics of missile science, including how missiles fly, how they are guided, and how they are used.
2. **Building a Missile:** This section provides step-by-step instructions on how to build a simple missile. The instructions are clear and easy to follow, and they require no special tools or materials.
3. **Flying a Missile:** This section teaches readers how to fly a missile. The instructions are safe and easy to follow, and they will help readers to learn the basics of missile flight.
4. **The Future of Missiles:** This section discusses the future of missile technology. It explores the potential applications of missiles, and it discusses the ethical implications of missile use.

The Girl Guide to Missiles is a groundbreaking book that will inspire a new generation of female scientists and engineers. It is a must-read for anyone who is interested in learning about science and engineering in a fun and engaging way.
